

COVID-19 LOCAL AUTHORITY TRAVEL AND TRANSPORT DATA WEEKLY DIGEST

Week commencing 15th March 2021

INTRODUCTION

Since the imposition of travel restrictions designed to help dramatically reduce the spread of Covid-19, the Transport Technology Forum has led the collation of transport data from local authorities into information used to understand changes in travel behaviour.

Authorities from cities, towns and counties across England are sharing urban traffic control and automated traffic counter data from the roadside, as well as information on cycling and car parks. Industry has also supplied video analytics and floating vehicle data patterns. This sits alongside data the Department receives about rail and air, public transport, freight and maritime to summarise how, where and when people and goods are moving around the country.

The Transport Technology Forum can publish outcomes from this data set for interested parties, not least those bodies who went above and beyond the call to share their data with us.

ABOUT THE FORUM

This document has been prepared by Arup on behalf of the Transport Technology Forum (TTF) as part of its remit to drive more effective and efficient management of existing and new road networks, as a key national opportunity before, during and after the current COVID-19 emergency. Road transport will remain a key pillar of how people and goods move across the nation, not just on strategic roads. Improving road travel through technology is a core aim of the Forum. The Forum promotes a collaborative culture to open-up the opportunity and address the caution which has historically impeded efficiency and innovation.

ABOUT THIS REPORT

The report provides an ongoing snapshot of travel, summarising weekly, daily, and hourly changes based on information shared by:

- Traffic – 29 data providers, geographically covering approximately 107 local authority districts.
- Cycling – 16 data providers, geographically covering approximately 84 local authority districts including nationwide canal and river paths.

This provides an overview of how public behaviour is changing and what new patterns are being experienced. Local Authorities can benefit by being able to compare what is happening in their areas with the national picture, allowing local and national comparisons to be drawn.

WEEKLY HIGHLIGHTS AND SUMMARY

Traffic

- Restrictions first implemented on 5th January 2021 as part of the third national lockdown in England, have begun to be lifted, with schools having reopened on the 8th of March. This is reflected in the average daily traffic flow, which continues to increase compared to the baseline, as seen in Figure 1. Overall traffic volumes for the week commencing 8th March have increased by 5% compared to the previous week, with Monday, Friday and Sunday experiencing the largest increases with 7% more traffic compared to the previous week (Figure 2).
- Figure 3.1 shows that the weekday AM peak has become more pronounced following school re-opening on 8th March. This trend resembles the trend seen during the second national lockdown. Weekend traffic levels have increased during the interpeak compared to the previous week, and follows a similar trend to that seen pre-pandemic, as shown in Figure 3.2.
- Weekday car levels varied between 8.5% and 20% below the baseline for the week commencing 8th of March, while weekday HGV/LGV levels varied between 3% and 20.5% above the baseline, as shown in Figure 4.1. Figure 4.2 shows that weekend car levels were at 9% below the baseline, while HGV/LGV levels were consistent at 20% above the baseline on the weekend.
- Local authorities examined in further detail in this report include Birmingham, Derbyshire, Hampshire, Suffolk, City of York, and Leicestershire (excluding Leicester City). The local authority profile is consistent with the national profile with sharper AM peaks observed following the reopening of schools on the 8th of March. In City of York, Hampshire, Derbyshire, and Leicestershire, traffic levels have increased above those seen during the second national lockdown. In Suffolk and Birmingham, the traffic levels are approaching those seen during the second national lockdown during the AM and PM peak.
- Figure 9 shows that traffic is on average lower on Mondays and higher on Sundays during Lockdown 3, when compared to the day of week trend seen pre-pandemic. Lockdown 3 levels are on average squarely in between Lockdown 1 and Lockdown 2 levels.
- Figure 10 shows a comparison of median traffic levels for timelines of the three national lockdowns. Lockdown 2 experienced a surge in traffic levels immediately before the lockdown, possibly due to businesses mobilising in advance of widespread closure and people travelling to different locations to isolate. Lockdown 3 levels started at Lockdown 1 levels but are now approaching Lockdown 2 levels.
- Figure 11 shows that Lockdown 3 weekday traffic volumes have clearly distinguishable AM and PM peaks, as opposed to Lockdown 1, which appears more neutral to the traditional peaks with a higher level of interpeak traffic.

Cycling

- As a result of Improved weather conditions across England, cycling levels have increased compared to previous weeks (Figure 6).
- Weekday cycling for the week commencing 8th March has distinguishable AM and PM peaks, with marginally increased levels during the AM peak compared to the previous week (Figure 8.1).
- The weekend cycling profile is similar to the previous two weeks, as shown in Figure 8.2.

1. CHANGE IN AVERAGE DAILY TRAFFIC FLOW OVER TIME

Compared to baseline (%)

Traffic levels are approaching those seen before the third national lockdown.

2. CHANGE IN AVERAGE DAILY TRAFFIC FLOW BY DAY OF WEEK

Compared to baseline (%)

Traffic levels remain well below the baseline.

Overall traffic volumes have increased by 5% compared to the previous week.

Average day of week traffic volumes compared to a pre-pandemic week (10/02/2020), and the 3 most recent weeks.

3.1. MEDIAN WEEKDAY TRAFFIC BY HOUR OF DAY

Hourly traffic counts

The weekday AM peak has increased since schools reopened on 8th March.

The trend is very similar to the trend seen during the second national lockdown.

Weekday traffic volumes compared to a pre-pandemic week (10/02/20) and early lockdown (06/04/20) across all datasets. This graph uses the median traffic count for each hour of each weekday, as well as the median across all weekdays. This is different to what has been published in previous reports (before 15 March 2021), which made use of the sum of traffic counts for each hour of each weekday, and the average across all weekdays.

3.2. MEDIAN WEEKEND TRAFFIC BY HOUR OF DAY

Hourly traffic counts

Weekend traffic has shown little change compared to the previous 2 weeks. While lower in volume, the trend is similar to that seen pre-pandemic.

Weekday traffic volumes compared to a pre-pandemic week (10/02/20) and early lockdown (06/04/20) across all datasets. This graph uses the median traffic count for each hour of each weekday, as well as the median across all weekdays. This is different to what has been published in previous reports (before 15 March 2021), which made use of the sum of traffic counts for each hour of each weekday, and the average across all weekdays.

4.1. CHANGE IN AVERAGE WEEKDAY TRAFFIC FLOW BY VEHICLE CLASS

Compared to baseline (%)

Car levels vary between 8.5% and 20% below the baseline for the w/c 8th of March.

HGV/LGV levels vary between 3% and 20.5% above the baseline.

Change in average vehicle trips by vehicle class where available in the source dataset.

4.2. CHANGE IN AVERAGE WEEKEND TRAFFIC FLOW BY VEHICLE CLASS

Compared to baseline (%)

Car levels during the weekend are consistent at 9% below the baseline.

HGV/LGV levels during the weekend are consistent at 20% above the baseline.

Change in average vehicle trips by vehicle class where available in the source dataset.

5.1. FOCUS ON LOCAL AUTHORITIES

Map of local authorities

Five local areas are examined that provide a good geographic spread.

Data has been provided by: Birmingham City Council, City of York Council, Suffolk County Council, Hampshire Council, Derbyshire County Council, Leicestershire County Council (excludes Leicester City).

5.2. MEDIAN WEEKDAY TRAFFIC BY HOUR OF DAY FOR LOCAL AUTHORITIES

Hourly traffic counts

5.2.1. BIRMINGHAM

Traffic levels in Birmingham are approaching those seen during the second national lockdown. The AM peak is more pronounced compared to previous weeks.

5.2.2. DERBYSHIRE

Traffic levels in Derbyshire approach those seen during the first national lockdown. The AM peak is more pronounced compared to previous weeks.

5.2.3. HAMPSHIRE

Traffic levels in Hampshire exceed those seen during the second national lockdown and the AM peak is marginally more pronounced.

5.2.4. SUFFOLK

Traffic levels in Suffolk are similar to levels seen during the previous 2 weeks. The PM peak is similar to that seen during the second national lockdown.

5.2.5. CITY OF YORK

AM peak traffic levels in the City of York are very pronounced and are exceeding baseline levels as well as those seen during the second national lockdown.

5.2.6. LEICESTERSHIRE (EXCEPT LEICESTER CITY)

Traffic levels in Leicestershire are similar to those seen during the previous week. The AM and PM peaks are very pronounced, with traffic remaining marginally above levels seen during the second national lockdown, but below the pre-pandemic baseline.

6. CHANGE IN AVERAGE DAILY CYCLING FLOW

Compared to baseline (%)

Improved weather conditions have seen increased cycling levels in March 2021.

Change in average daily cycling volumes since 1st of March across all sources compared to the baseline (the first week of February 2020)

7. CHANGE IN AVERAGE DAILY CYCLING BY DAY OF WEEK

Compared to baseline (%)

Cycling levels are higher compared to the baseline at the start of the week 8th March.

8.1 MEDIAN WEEKDAY CYCLING BY HOUR OF DAY

Hourly counts

Interpeak weekend cycling remains high above the baseline.

The AM peak is more pronounced than during the previous 2 weeks.

Weekday cycling volumes compared to a pre-pandemic week (10/02/20) and early lockdown (06/04/20) across all datasets. This graph uses the median cycling count for each hour of each weekday, as well as the median across all weekdays. This is different to what has been published in previous reports (before 15 March 2021), which made use of the sum of cycling counts for each hour of each weekday, and the average across all weekdays.

8.2 MEDIAN WEEKEND CYCLING BY HOUR OF DAY

Hourly counts

Weekend cycling

Weekend cycling volumes compared to a pre-pandemic week (10/02/20) and early lockdown (06/04/20) across all datasets. This graph uses the median cycling count for each hour of each weekend day, as well as the median across all weekend days. This is different to what has been published in previous reports (before 15 March 2021), which made use of the sum of cycling counts for each hour of each weekend day, and the average across all weekend days.

9. LOCKDOWN CHANGE IN AVERAGE DAILY TRAFFIC BY DAY OF WEEK

Compared to baseline (%)

Lockdown 3 averages are situated between Lockdown 1 and Lockdown 2.

The average levels of Lockdown 3 approach those seen during Lockdown 2.

Comparing the average weekday median percentage change from the baseline for the first, second and third national lockdowns. It should be noted that at the time of writing, the third national lockdown was still ongoing and therefore only data between 05/01/21 and 14/03/21 has been included for lockdown 3.

10. LOCKDOWN PERCENTAGE CHANGE FROM BASELINE

Compared to baseline (%)

Lockdown 2 saw a surge in traffic immediately before the lockdown.

Lockdown 3 levels, while initially in between Lockdown 1 and 2 levels, are now approaching Lockdown 2 levels.

Comparing the median percentage change from the baseline for the first, second and third national lockdowns. It should be noted that at the time of writing, the third national lockdown was still ongoing and therefore only data between 05/01/21 and 14/03/21 has been included for lockdown 3.

11. LOCKDOWN MEDIAN WEEKDAY TRAFFIC BY HOUR OF DAY

Hourly Counts

Lockdown 3 has clearly distinguishable AM and PM peaks, as opposed to lockdown 1, which appears neutral to the traditional peaks.

Comparing the average weekday traffic count by hour of the day for the first, second and third national lockdowns. It should be noted that at the time of writing, the third national lockdown was still ongoing and therefore only data between 05/01/21 and 14/03/21 has been included for lockdown 3.

DATA METHOD

The following provides some detail behind how the data has been analysed:

- The baseline has been defined as the first week of February 2020 (1st February – 7th February) for the following reasons:
 - This is consistent with national reporting.
 - Not all data sources can provide baseline data from previous years.
 - The first week of February is considered a normal working week unaffected by poor weather and half term dates later in February.
- Each day of the week has its own baseline.
- Only those datasets for which data was available for the first week of February have been included in the baseline comparison outputs.
- Baseline comparisons at aggregated Local Highway Authority (LHA) level have only been calculated using traffic/cycling sensors that contributed to the baseline to reduce the impact of new sensors being added to data sources
- Average daily traffic volumes have been used to minimise the impact of individual sensors changing between active and inactive states.
- Averages have been calculated using the median (50th percentile) to reduce the impact of outliers (with the exception of Figures 10.1 & 10.2 which are a mean average)

Please note that each week not all datasets that contribute to our analysis are available when this report is produced. Therefore, as we add new datasets when they become available, enhance validation of those we've received and refine the underlying methodology, the overall values may change, however we expect the trends to remain the same.

COVID-19 Timeline

FEBRUARY 2020	
04/02/2020	China Advice – All UK citizens advised to leave China
MARCH 2020	
10/03/2020	Italy Air Travel – Majority of flights to and from Italy suspended
12/03/2020	7-day Isolation – 7-day self-isolation for individuals presenting symptoms
16/03/2020	Social Distancing – Households to self-isolate for 14-days if symptoms present. Work from home where possible. Avoid pubs, clubs, theatres etc. 12-week isolation for elderly and vulnerable (commencing end of week)
17/03/2020	UK Foreign Travel 1 – Foreign Secretary advises against all non-essential travel overseas
21/03/2020	Schools Closed – Schools to remain closed until further notice (exception for key workers)
23/03/2020	UK Lockdown – Guidance provided for essential travel only. All non-essential businesses required to close. Public events banned
23/03/2020	UK Foreign Travel 2 – Foreign Secretary advises all British travellers to return to the UK
28/03/2020	PM's Letter – Prime Minister issues guidance letter to all UK households
APRIL 2020	
16/04/2020	NPCC Guidance – NPCC issues guidance clarifying reasonable excuses for leaving home
MAY 2020	
10/05/2020	Those who cannot work from home are encouraged to return to work. Avoid public transport where possible and instead walk or cycle.
11/05/2020	Relaxation Document – The UK government publishes a 50-page document setting out further details of the phases for lifting the lockdown restrictions.
13/05/2020	Individuals can undertake unlimited exercise (and can travel to do so). Individuals can meet someone from another household providing it is on a one-to-one basis. All garden centres are allowed to open. House moves and viewings are now permitted.
18/05/2020	Rail Operators – Rail operators begin running more train services.
JUNE 2020	
01/06/2020	Schools re-open for some pupils. Groups of up to six people from different households allowed to meet outside
15/06/2020	All non-essential retailers and zoos in England reopened
19/06/2020	UK's COVID-19 Alert Level is lowered from Level 4 (severe risk, high transmission) to Level 3 (substantial risk, general circulation)

JULY 2020	
04/07/2020	Further relaxation of social distancing and reopening of pubs, restaurants, hotels and hairdressers on 4 th July
25/07/2020	Gyms and other indoor services reopen in England
AUGUST 2020	
21/08/2020	Driving tests are approved to go ahead
SEPTEMBER 2020	
01/09/2020	Large number of schools across England re-open for the autumn term
08/09/2020	All schools across England have re-opened
14/09/2020	Rule of six comes into effect to tackle coronavirus, where any social gatherings of more than six people will be against the law
OCTOBER 2020	
14/10/2020	Tiered level restrictions were implemented across different local areas in England. Liverpool placed on highest alert (Tier 3).
NOVEMBER 2020	
05/11/2020	England goes into second National Lockdown
DECEMBER 2020	
02/12/2020	Second national lockdown in England ends and three-tiered local restriction system is re-implemented.
20/12/2020	London and South East England enter Tier 4 restrictions.
JANUARY 2021	
05/01/2021	Third national lockdown in England commences.
MARCH 2021	
08/03/2021	All schools re-opened

Contact us

All authorities are encouraged to share best practice for inclusion in this report. Authorities not yet contributing but who still have data to share are encouraged to do so.

Please contact info@ttf.uk.net

Thank you to...

All local authorities and their consultancies and contractors who have shared data with the Transport Technology Forum to enable this report to be collated, and those in the wider industry who also provided data directly. The TTF, which is sponsored by the Department for Transport and Innovate UK is grateful to ITS (UK) and its members for their swift support in recruiting Local Authorities to participate.

The 'Understanding Travel Patterns during COVID-19' project has been awarded the [ITS UK - Project of the Year Award 2020](#) which would not have been possible without all of your support. The judges were impressed that this project demonstrated how the industry can come together, and underlined how the TTF can coordinate a collaborative front with Local Authorities and commercial data suppliers to collect, process and visualise over 16 million travel movements during the lockdown period and beyond.

This report provides regularly updated intelligence and findings from the Transport Technology Forum COVID-19 Local Authority Travel Data Project. This project is collecting and analysing traffic and travel data from local highway authorities across England to present a national picture of travel patterns and behaviour, and local authority responses to the COVID-19 crisis.
